

NUUO Gives Urmieh University A Secure School Environment

Taipei, Taiwan

Consider the safety of the staffs and the students, Urmieh University (Urmia University), one of the greatest university in Iran, recently increase its surveillance system with 80 of Axis network (IP) cameras with NUUO surveillance management system "IP-series."

Urmia is an ancient city located in North West of Iran and is the seat of West Azerbaijan province. The old Campus of the University which is now being used as the University headquarters has originally been built and used by the American Presbyterian Missionary on and about 1878. The university itself was officially established in 1965, currently with 5 colleges and 6750 students. There are a total of 5 urban campuses spreading in West Azerbaijan. The

development of facilities and the increasing of student population have brought out the urgent need to tightening its security.

The strategy was to set up new surveillance system to prevent theft, robbery and school violence on different locations of the campuses. The system was expected to reduce security cost, and increase its efficiency. With a special display managing all 80 different live campus views simultaneously, this system was able to auto detect for security personal with NUUO "I-Guard" system. Security personal will be noticed for unusual events in first place by 6 kinds of sirens, and remote live monitoring with 3GPP device while patrolling around the campus.

The use of the Axis network cameras and NUUO surveillance management software achieved its desired result - i.e. to increase the awareness of a reinforced security environment, as well as reduces criminal act around campus.
