NUUO Intelligent Video Surveillance (IVS) system provides advanced, accurate video analytic for both IP and analog cameras. The IVS engine can track, classify and analyze the behavior of individual or group of objects over long distance to greatly improve parameter security and monitoring efficiency.

**Main Advantages**
- Compatible with IP cameras and analog cameras
- Compatible with existing NUUO Mainconsole
- Record on IVS & Record transcoding
- Scalable and Flexible
- Supports 8 instant responses
- Intelligent event search with video
- Easy to set up
- Cost effective
- Low CPU consumption
- Intuitive and unique 3D grid calibration
- 40 detection zones and tracks up to 100 targets per camera
- Self-learning algorithm automatically adapts to environment changes
- Suitable for PTZ camera and thermal camera

**Design Highlights**

### People Counting
This counting solution includes a bi-directional line-crossing filter, suitable for counting people in busy doorways and entrances.

### Vehicle Counting
This counting solution captures statistics on vehicle flow, it also provides an estimated speed of the vehicle.

### Stabilizer
In environments where camera stability is an issue, this feature will compensate for any movement to provide a clear view.

**IVS Packages**
- SCB-IP-P-IVS COUNTING
- SCB-IP-P-IVS SURVEILLANCE
- SCB-IP-P-IVS ADVANCED
**Design Highlights**

**Tamper Detection**
Detects any event that significantly changes the field of view of the camera, such as loss focus, a camera being covered up...etc.

**Presence Filter**
(Tripwire) Detects when an object or individual has penetrated the defined perimeter.

**Appear and Disappear**
Used to detect people appearing or disappearing through a doorway but ignores people passing by in front of the doorway.

**Enter and exit**
An alarm is triggered when an object crosses from the outside to the inside of a detection zone. Conversely, an alarm is triggered when an object crosses from the inside to the outside of a detection zone.

**Dwell**
Objects that dwell inside a zone for longer than the pre-defined amount of time will trigger an alarm such as loitering people.

**Stopping**
Objects that are stopped inside a zone for longer than the defined amount of time will trigger an alarm.

**Tailgating**
Object tailgating is defined as two objects crossing a virtual line or zone within in a pre-defined time frame. This can be used with vehicles or with people in an access control environment.

**Direction**
Objects that travel in the configured direction (within the limits of the acceptance angle) through a zone or over a line trigger an alarm.
